

M8 Stud Bolt Torque Chart

M8 · 6 property classes · K 0.12 / 0.15 / 0.20 · N·m · target preload kN · coarse + fine thread

M8

As 36.6 mm² · N·m

Torque by Property Class and Nut Factor K

Class	Rp0.2 (MPa)	Target preload (kN)	K 0.12 N·m	K 0.15 N·m	K 0.20 N·m
4.8	340	8.7	8	10	14
8.8	640	16.4	16	20	26
10.9	940	24.1	23	29	39
12.9	1100	28.2	27	34	45
A2-70	450	11.5	11	14	18
A4-80	600	15.4	15	18	25

Each K column shows the tightening torque at that nut factor (N·m). K combines thread and bearing-surface friction: 0.12 ≈ well lubricated (MoS₂ / assembly paste), 0.15 ≈ normal assembly oil (typical default), 0.20 ≈ unlubricated or plated surfaces. Select by your actual lubrication condition; verify on site for critical joints.

Fine-Thread Torque Matrix

Fine-thread series (M8 × 1 mm) target preload and tightening torque, same basis as the coarse chart; the fine-thread stress area As follows ISO 898-1:2013 Table 6 (this page takes M8 As = 39.2 mm²).

Class	Rp0.2 (MPa)	Target preload (kN)	K 0.12 N·m	K 0.15 N·m	K 0.20 N·m
4.8	340	9.3	9	11	15
8.8	640	17.6	17	21	28
10.9	940	25.8	25	31	41
12.9	1100	30.2	29	36	48
A2-70	450	12.3	12	15	20
A4-80	600	16.5	16	20	26

Basis of Calculation & Sources

Torque follows the K-factor (nut factor) method $T = K \cdot D \cdot F$: D is the nominal diameter and F the target preload = 70% of $Rp0.2 \times$ thread stress area (As = {as} mm²). Yield strengths are published values from ISO 898-1 (carbon/alloy steel) and ISO 3506-1 (stainless A2/A4). The three K columns follow the standard stud-bolt torque table format (K = 0.12 / 0.15 / 0.20), the same three-column output as the online torque calculator's stud bolt mode.

Boundary: this chart is a simplified K-factor estimate, not a full VDI 2230 analysis (which also accounts for joint resilience, embedment and assembly method). Friction and lubrication are the dominant variables — the spread between K 0.12 and K 0.20 can reach ~65% of the torque value. Always follow the design specification or the manufacturer's torque table.
